AutoCAD (and its predecessor, AutoCAD LT) has an integrated drawing editor with support for layers, attributes, and other information. It allows the user to draw on screen and to save the data as a DXF or DWG file. The drawing editor can be opened in various formats, including on-screen, PDF, and Microsoft Word. The drawing editor also has many features for working with layers and blocks, including layer types, block types, and layouts. Drawing in AutoCAD can be compared to writing code for computer languages like HTML, XHTML, XML, JavaScript, PHP, and Java; in that code is a 'document' and in the AutoCAD drawing is a 'web page'. The products include the AutoCAD BIM Plug-in, Model Derivative Tool, ASW (analysis software system), and FBP (form builder). A basic design knowledge is required for use of all the products. All of the programs can operate as standalone applications, with support for the AutoCAD Drawing and/or DWG files. It allows users to create 2D or 3D graphical models, which they can manipulate and animate for rapid prototyping and product design purposes. Users can also use the various GRAF tools to create associative parametric surfaces. Sunday, August 17, 2010 Sunday Journal - Thursday The weather was gorgeous here in Connecticut so we were outside the entire day. We were so busy in the morning that we didn't get back into the house until around 6 p.m. Tom's office has taken up most of our living room, but we still have enough left for me to sit down. My back hurts like crazy, but I don't have any of the symptoms that I did from last year, so that is good. I didn't take a single picture this morning. Watched a little Dexter at breakfast and then went to ride with Tom to pick up the carpet and pads we ordered. I have spent the last three years paying for our own installers, and then selling our house in two days and having the carpet and pads installed for free.
